

What Sets TradeLocker a Cut Above the Rest?

Key Takeaways

- Master the art of trading without the need to download additional software.
- Customizable charts and one-click actions make trading a breeze so you can focus on your winning strategy.

As we constantly evolve and develop our technology to provide the services our traders expect and deserve, we are excited to introduce the most innovative platform in modern trading - TradeLocker. Not afraid to branch out into new territory, TradeLocker is constantly pushing the boundaries of innovation and setting a new gold standard for traders around the globe. By listening to the needs of 2.5 million traders, this next-gen day trading platform is built to deliver a community-driven trading experience anytime, anywhere. TradeLocker is the Next Big Thing, and here are the reasons why you should be part of it.

User-Friendly Interface

Arguably one of the most important features of a trading platform is how user-friendly its interface is. A messy, chaotic interface can be off-putting. For years now, millions of traders have put themselves through the wringer trying to understand complicated platforms - that ends here.

TradeLocker's team has carefully crafted an easy-to-use and intuitive platform, raising the barrier for entry for newbies all the way to seasoned experts. On top of that, you don't need to clog up your devices by downloading any additional software, which means that you can trade from any device, on the go, enjoying independence like never before.

To start off in the instruments/pairs section, there's a handy search bar at the top of the screen so you can quickly zone in on your favorite currency pairs and from there on you can easily view chart data for your selected instrument. What's more, you can quickly switch accounts directly from the Profile Settings section, so you can effortlessly keep track of your trades.

Over 500+ Assets

With TradeLocker, you can buy and sell over 500 assets with ease. This opens the door to a whole new world of opportunities for portfolio diversification and risk management options. With such a wide variety of instruments to play with, both new and experienced traders can beef up their knowledge by exploring and figuring out what assets align with their overall goals.

One-Click Trading

In a rapidly growing and ever-changing financial landscape, TradeLocker understands and represents traders who need to react quickly and efficiently. With one-click trading, you can respond immediately to market moves, reducing the latency between your decision and execution. For our scalpers and day traders, this is an essential feature. However, it can be turned on or off depending on your personal preference.

Trade Micro Lots

With its innovative features, TradeLocker paves the way for the flawless trading of micro lots, with a minimum lot size of 0.01 pips. By offering traders the flexibility to open smaller positions, it opens up a wealth of opportunities for traders of all skill levels to actively play a role in global markets.

Advanced Charting from TradingView™

TradeLocker has teamed up with TradingView™ to create the best user experience possible. Packed to the brim with customization options, the integration allows for custom-tailoring the perfect charts easily.

Just like on TradingView™ itself, traders can now switch things up and craft their charts to suit their needs. This feature comes in especially useful when conducting your technical analysis so you can quickly assess price movements, identify trends, and make informed decisions. This in turn gifts traders full autonomy over their trades.

For starters, TradeLocker boasts a style switcher, so traders can choose from any chart style including, but not limited to, Candles, Bars, Lines, and Columns. From there, why not play around with the different themes and colors to match your charts to your personal style?

On-Chart Trading

Moreover, traders can also dive into on-chart trading. This unique method combines functionality and innovation, enabling traders with the option to interact with their charts directly to execute their trades for a more streamlined experience.

Stop Loss & Take Profit Calculator

Traders spoke, and TradeLocker listened. The trading platform has freshly integrated a brand-new Stop Loss & Take Profit calculator. With this new educational feature, there's no need for complicated math.

The SL & TP calculator is a valuable tool that offers a multitude of benefits to traders, including new ways to practice their trading discipline, optimize their risk management strategies, and ultimately improve their overall performance.

In a Nutshell...

With a multitude of educational tools, customizable features, and an easy-to-use interface, it's clear as day to see why TradeLocker is taking up some prime real estate in the trading ecosystem. The industry is quickly shifting towards TradeLocker as it revolutionizes the world around it, pulling brokers and traders alike into its orbit.

TradeLocker has curated a community-based platform, seeking and providing fair treatment and accessibility for all. As the old adage goes, "A rising tide lifts all boats". See for yourself and open a TradeLocker account today.
